

ACCF project white paper

(Ver1.0)

Table of Contents

1. Executive Summary

2. Project Background

- The importance of the RWA market
- ACCF's vision

3. Why Blockchain

- The necessity of blockchain
- Decentralization and reliability

4. The role of Asset AI and the economic model (Why Token & Tokenomics)

- AssetAI's functions
- Token economic model
- Revenue generation structure

5. Technical Architecture

- Platform architecture
- Design and implementation of smart contracts
- Security mechanisms

6. Cheongchun Ilbeonga: The platform's first RWA project

7. Conclusion & Future Outlook

8. Appendices & Legal Disclaimers

1. Executive Summary

The ACCF (Asset Chung Chun First) project is an innovative RWA (Real World Asset) platform that digitizes physical assets for secure trading. This platform converts various assets, such as real estate, artwork, bonds, and jewelry, into digital tokens, providing a convenient environment for global investors to access them easily.

AssetAI is the core tool of the ACCF platform, an artificial intelligence designed to rediscover and precisely evaluate the intrinsic value of real estate assets. By analyzing and assessing assets, AssetAI provides fair market value, which forms the basis for tokenizing assets and offering opportunities for small investors to participate.

The goal of ACCF is to discover the true value of assets and create an environment for fair trading. The ACCF platform, with its decentralized structure, enables direct communication between asset owners and investors without intermediaries, fostering a sustainable ecosystem through a fee-based revenue model. The Cheongchun Ilbeonga project is the first case of an asset being converted into an RWA through the ACCF platform, providing a space to rediscover and fairly trade the intrinsic value of real estate.

2. Project Background

The importance of the RWA market

The RWA (Real World Asset) market significantly enhances asset liquidity by converting physical assets into digital tokens using blockchain technology, providing more investment opportunities in the global market. Assets such as real estate, artwork, bonds, and jewelry have traditionally been difficult to access due to their high value and low liquidity. However, RWA platforms digitize these assets, offering investment opportunities that are accessible to everyone.

ACCF's Vision

ACCF aims to establish itself as a leading platform in the RWA market by rediscovering and fairly evaluating the intrinsic value of assets, converting them into digital assets. ACCF provides a secure environment for anyone worldwide to trade assets and offers opportunities for small investors to invest in high-value assets. Through this, ACCF seeks to expand accessibility to the global asset market and maximize the value of assets.

3. Why Blockchain

The Necessity of Blockchain Technology

In RWA projects, blockchain technology is a crucial element that provides transparency and security in asset management and transactions.

Blockchain allows data to be securely stored and managed in a decentralized network without centralized intermediaries, ensuring transparent records of asset ownership and transaction history.

Decentralization and Reliability

Blockchain technology minimizes intermediary involvement in asset transactions and enables direct dealings between asset owners and investors. A decentralized structure reduces the risk of data manipulation and ensures that all participants share the same information, significantly enhancing the market's reliability.

4. Asset AI's Role & Tokenomics

Functions of Asset AI

Asset AI is an artificial intelligence system on the ACCF platform responsible for analyzing and evaluating real estate assets.

Asset AI performs the following functions:

- Asset Value Assessment
It precisely evaluates the intrinsic value of real estate by comprehensively analyzing factors such as location, market trends, and economic indicators.
- Investment Risk Analysis
It analyzes potential risk factors of assets, providing investors with information to enhance the safety of their investments.
- Automated Report Generation
It automatically generates easy-to-understand reports for investors based on the analysis results of the assets.
- Real-Time Market Data Integration
It dynamically assesses the value of assets by reflecting the latest market data in real time.

Tokenomics

Token Issuance and Initial Value

The ACCF project issues a total of 60 million ACCF tokens, with each token initially valued at 1,000 KRW. The total initial value of the issued tokens amounts to 60 billion KRW, determined based on asset valuation and market demand.

- Total Issuance: 60,000,000 ACCF tokens

- Initial Value per Token: 1,000 KRW
- Initial Total Value: 60 billion KRW

Revenue Generation Structure

The ACCF platform establishes a sustainable ecosystem through the following revenue structures:

- **Asset Registration Fee**

Asset owners pay a fee when registering their assets on the platform. This fee covers the costs associated with asset valuation and tokenization.

- **Transaction Fee**

A small transaction fee is charged when investors trade assets through the ACCF platform. This fee supports the platform's operation and maintenance.

- **Asset AI Service Fee**

Users who receive asset evaluation reports through Asset AI are charged a small service fee.

Investor Benefits

ACCF token holders can enjoy various benefits within the platform:

- **Revenue Sharing**

ACCF token holders can receive a portion of rental income and transaction profits from assets.

- **Platform Usage Discounts**

Investors holding a certain amount of ACCF tokens receive discounts on transaction fees and Asset AI service fees.

- **Governance Participation**

ACCF token holders have the right to vote on important platform decisions, allowing them to participate in shaping the platform's future direction.

5. Technical Architecture

Platform Architecture

The ACCF platform is built on the Ethereum blockchain and integrates various technological components to support stable asset management and transactions. The key technical elements are as follows:

- Ethereum Blockchain

The foundational platform that supports smart contracts and asset transactions, enabling the issuance and management of ACCF tokens following the ERC-20 standard.

- Smart Contract Engine

A smart contract system that automates processes such as asset registration, transactions, and revenue distribution.

- Asset AI Engine

An artificial intelligence system responsible for asset evaluation and analysis, integrating various data sources to precisely assess asset value.

Design and Implementation of Smart Contracts

The smart contracts on the ACCF platform are designed to automate asset management and revenue distribution. These smart contracts include the following functionalities:

- Asset Registration and Management

Supports asset owners in registering and managing their assets on the platform.

- Transaction Processing

Automatically handles asset transactions between investors and records all transaction details on the blockchain.

- Revenue Distribution

Automatically distributes rental income and transaction profits to ACCF token holders.

Security Mechanisms

The ACCF platform protects user assets and data through the following security mechanisms:

- Encryption Technology

All data is encrypted and securely stored, ensuring the safety of assets and transaction records.

- Consensus Algorithm

Utilizes the PoS (Proof-of-Stake) consensus algorithm to maintain network security and ensure integrity.

- Security Audits

Regular security audits are conducted on smart contracts and platform code to identify and address potential vulnerabilities proactively.

6. Cheongchun Ilbeonga: The platform's first RWA project

Cheongchun Ilbeonga is the first example of an asset converted into an RWA through the ACCF platform. Located in Bangok-dong, Sejong Special Autonomous City, Cheongchun Ilbeonga is a commercial facility whose value is precisely evaluated by Asset AI and made tradable as digital tokens on the ACCF platform. This project focuses on rediscovering the true value of real estate assets and providing investors with fair trading opportunities.

Project Overview

- Location: Bangok-dong, Sejong Special Autonomous City
- Total Area: 9,589.26m²
- Key Facilities: Commercial facilities, franchise stores, refurbished stores, live. broadcasting offices
- Expected Yield: 2.61%

Cheongchun Ilbeonga is expected to generate stable rental income based on the high demand and commercial potential of the local market.

AssetAI evaluates the intrinsic value of this asset, providing global investors with fair trading opportunities.

7. Conclusion and Future Outlook

The ACCF project digitizes physical assets, creating an environment for secure and transparent transactions in the global market. Precise asset evaluation through AssetAI and a decentralized transaction structure maximize asset value, offering small investors access to high-value assets.

Starting with Cheongchun Ilbeonga, the ACCF platform plans to expand its RWA projects beyond real estate to various other assets. Through this, ACCF aims to establish itself as a leading platform in the global RWA market, continually driving innovation in asset trading.

8. Appendices & Legal Disclaimers

Financial Projections

– Token Issuance and Initial Value

The ACCF project issues a total of 60 million ACCF tokens, with each token initially valued at 1,000 KRW. The total initial value of the issued tokens amounts to 60 billion KRW.

– Rental Income Analysis

The rental income from Cheongchun Ilbeonga's commercial facilities is a key revenue source for the ACCF project. Below is the projected rental income analysis for the next five years:

- Year 1: Estimated annual income of approximately 1 billion KRW
- Year 2: Estimated income of approximately 1.2 billion KRW due to rent increases
- Year 3: Estimated rental income of 1.5 billion KRW
- Year 4: Estimated rental income of 1.8 billion KRW
- Year 5: Estimated rental income of 2 billion KRW

– Token Dividend Projections

- Year 1: Out of the total rental income of 1 billion KRW, 80% will be distributed as dividends, amounting to 800 million KRW.
- Year 2: Expected dividend of 960 million KRW.
- Year 3: Expected dividend of 1.2 billion KRW.
- Year 4: Expected dividend of 1.44 billion KRW.
- Year 5: Expected dividend of 1.6 billion KRW.

Legal Disclaimers

– Legal Compliance

The ACCF project strictly complies with the laws and regulations of South Korea, including legal requirements such as Anti-Money Laundering (AML) and Know Your Customer (KYC) procedures. All investors must adhere to the legal requirements of their respective countries when making investment decisions.

– Investor Protection

To protect investors' rights, the ACCF project has established the following protective measures:

- Investor Protection Fund

A fund is established to safeguard against unexpected losses or project failures.

- Dispute Resolution Mechanism

A mechanism, including legal consultation, is in place to ensure fair resolution. in the event of disputes.

- Investor Rights

ACCF token holders are provided with transparent information to fully understand the project's financial status and risk factors.

– Limitation of Liability

The ACCF project team assumes limited liability for losses caused by external factors such as market volatility, changes in legal regulations, or technical issues. Investors are advised to thoroughly understand these risk factors and make informed investment decisions.

– Risk Disclosure

Investing inherently involves risk, and the ACCF project is no exception. Significant risk factors, including market risk, legal risk, and technical risk, are present. Therefore, investors should fully understand these risks before making investment decisions.
